Signulu
The eSignature Expert!

What is
eSignature

eSignature is an electronic form of a wet ink signature. It is easy to use & implement, considered to be an equivalent of handwritten signatures. It does not require any kind of signing certificate.

eSignature can be typed, hand drawn using touch device or physical signature can be uploaded to be used as an eSignature.

It is easy to upload, archive & retrieve. Both parties can sign without any additional hardware. An 18 digit unique code is generated for every document signed which makes the entire transaction secure & tamper proof. Every transaction generates audit trail with vital data.

About
Signulu

The word Signulu means "to protect" and it is inspired from old Hawaiian.

Millennium Infotech Inc. is the company behind Signulu. An ingenious electronic signature platform that provides next level reliability, consistency, security and performance.

Founded by a team of professionals with combination of process and technology, dedicated to delivering a solution that reimagines the way individuals and businesses conduct electronic commerce.

Signulu, feature-rich eSignature platform

Simple to use:

- A quick, easy & efficient way to sign, send/receive manage documents on a single platform from anywhere.
